PRODUCT LIST

WORKTOPS AT TRADE

Worktops At Trade is one of the UK's leading suppliers of high quality, bespoke Quartz, granite and acrylic worktops to the trade. We offer exceptional service from the first contact to the final completion, ensuring excellent results and complete satisfaction. All our worktops are fabricated in house at our Wakefield factory using the latest computer numerical control machinery (CNC) to manufacture a controlled and precise worktop installation.

QUARTZ

Quartz worktops are fabricated from natural Quartz, one of the hardest minerals found on earth and small amounts of glass or metallic flecks to create a variety of beautiful worktops.

Some advantages of Quartz as a non-porous material, means that it's texture does not allow bacteria to grow and resists against stains and does not need to be sealed, helping to protect your family and making kitchen clean-up easy.

Apart from it's durability, Quartz is a beautiful material offering performance over traditional materials in a wide variety of colour options.

Unique Quartz is composed of natural materials. As a result it is subject to slight variances in colour, shade and particle structure, every effort has been made to represent our product in this brochure but due to printing limitations, we recommend that samples of the actual material are viewed before purchasing.

Fossil Shimmer

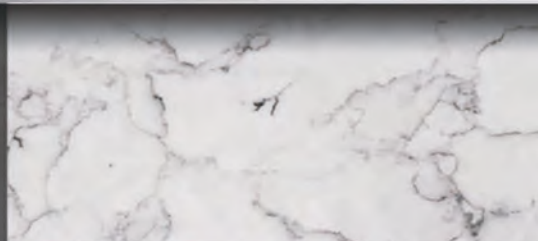

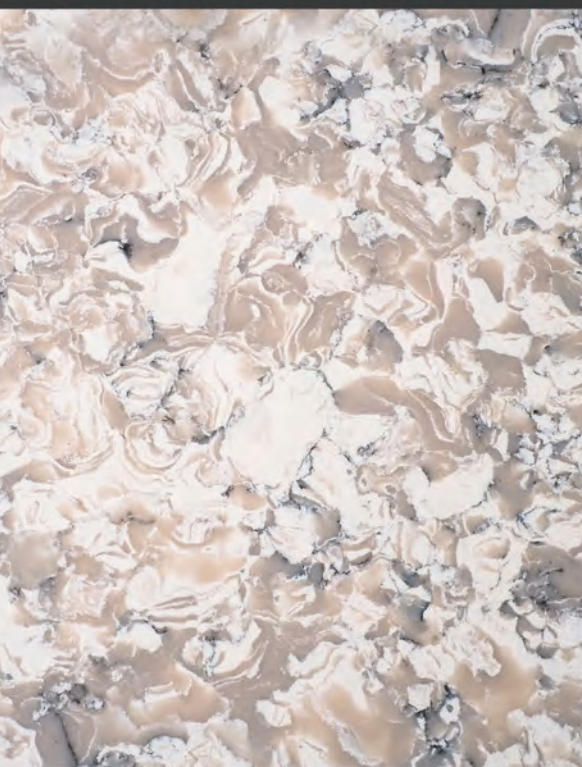

A modern kitchen featuring white cabinetry with glass-paned upper doors and solid lower doors. The countertops are made of white Carrara marble with grey veining. A large island with a matching marble top is in the foreground. A white mug with a black letter 'A' sits on a black coaster on the island. A round clock is on the wall to the left, and a built-in oven is visible on the right.

CARE & MAINTENANCE

Quartz is virtually maintenance free as a hard non-porous surface with no sealing required to renew the luster, soap and water or a mild detergent is enough to keep your Unique Quartz looking like new. If necessary you can use a non-abrasive soft soap along with a non-scratch or delicate pad, afterwards thoroughly rinse with clean water to remove residue.

PROTECTION FROM HOT TEMPERATURES

Unique Quartz is more heat resistant, durable and hard wearing than other stone surfaces including most granites, marble and limestone. But it does need protection from very high temperatures (above 150°C or 300°F) or sudden extreme temperature changes.

Therefore we suggest that hot pots and pans never be directly placed on the surface. We recommend a hot pad or trivet be placed under cooking equipment such as electric frying pans, crock pots and toaster ovens.

STUBBORN STAINS AND SPILLS

Life's inevitable spills and stains can usually be cleaned away effortlessly with mild detergent, cleaner and water. To remove stuck on material gently scrape away the excess with a plastic putty knife or non-scratch pad then wipe with warm water.

For extra stubborn stains a non-scratch ScotchBrite™ pad is recommended along with a non-abrasive cleaner, which won't dull the surface shine.

IT'S TOUGH, BUT NOT INDESTRUCTIBLE

Like any other surface Unique Quartz can be permanently damaged if exposed to strong chemicals and solvents that affect it's physical properties.

Avoid the use of strong chemicals, solvents and highly abrasive cleaning agents such as oven/grill cleaners and dishwasher polishing agents that have high alkaline/pH levels (higher than 11).

Products containing oils or powders may leave a residue and should be rinsed off immediately. Never clean with products that contain Trichloroethane or Methylene Chloride such as paint remover or strippers.

Should your surface be exposed to any of these damaging products was immediately with warm water to neutralize the effect.
